Naranjo Adverse Drug Reaction Probability Assessment

Training case worksheet | Synthetic educational data only

Case information

Case ID	SYN-PV-015
Patient	33-year-old male
Suspected product	Omeprazole 20 mg once daily, oral
Indication	Hypertension (as recorded in the supplied dataset)
Adverse event	Headache
Time to onset	16 days after treatment began
Expectedness reference	Known
Seriousness field	Hospitalisation (as recorded in the supplied dataset)
Dechallenge field	Unknown
Rechallenge field	Positive
Concomitant medicines	None reported
Reporter	Physician

Naranjo 10-question scoring

No.	Question	Answer	Score	Case-based rationale
1	Previous conclusive reports of this reaction?	Yes*	+1	Expectedness reference is recorded as “Known”; treated as supporting prior reports for this training assessment.
2	Did the event appear after the suspected drug was administered?	Yes	+2	Headache was reported 16 days after treatment began.
3	Did the event improve when the drug was discontinued or an antagonist was given?	Unknown	0	Structured dechallenge field is “Unknown”. Narrative says treatment was stopped and patient recovered, but does not clearly establish that recovery followed withdrawal; retain the structured unknown value.
4	Did the event reappear when the drug was readministered?	Yes*	+2	Structured rechallenge field is “Positive”, interpreted as a positive rechallenge for this exercise.
5	Were there alternative causes that could have caused the reaction?	Unknown	0	No concomitant medicines are reported, but the dataset does not document a complete assessment excluding other causes.
6	Did the reaction reappear with placebo?	Unknown	0	No placebo information is provided.
7	Was the drug detected in toxic concentrations in body fluids?	Unknown	0	No drug concentration result is provided.
8	Was the reaction worse with increased dose or less severe with decreased dose?	Unknown	0	No dose-response information is provided.
9	Did the patient have a similar reaction to the same or similar drugs previously?	Unknown	0	No previous reaction history is provided.
10	Was the adverse event confirmed by objective evidence?	Unknown	0	Headache is reported, but no objective test or finding confirming it is supplied.

Total Naranjo score	**5**

Classification	Probable

Scoring note: *Q1 is scored Yes because the dataset marks the expectedness reference as “Known”; this is an interpretation for the training exercise, not an independently verified literature search. *Q4 is scored Yes based on the structured “Positive” rechallenge field. The narrative/structured dechallenge mismatch is retained as Unknown rather than inferred.

Classification bands: ≥9 Definite; 5–8 Probable; 1–4 Possible; ≤0 Doubtful (some training materials may label the lowest category “Unlikely”).

Prepared from the supplied WORKORA synthetic training pack. Educational use only; not for clinical care or regulatory submission.
